

## NEW FACES AT INTERBUILD '08

### SPV SPECIAL PROJECTS SHOWCASE NEW PIZ PANELS STAND G115, HALL 5

Cladding specialist and consortium, **SPV Special Projects**, is showcasing its **Piz Panels** for the first time at Interbuild 2008.

The company is using its presence within the show's structural section (**Hall 5, Stand G115**) as a platform from which to launch its Piz Panel product to the UK market, which has been developed to meet energy saving requirements, as well as aesthetic appeal for architectural applications.

"Dramatic effects can be achieved through the re-cladding of buildings," says Howard Evans, Managing Director of SPV Special Products. "Not only is it a cost effective way of modernising dilapidated and out-of-date buildings to a high specification finish but with proven high thermal performance, Piz Panels and similar facing solutions are a sustainably viable option too."

SPV Special Projects is a consortium of companies that specialise in the complete design and build of large scale commercial buildings, such as hotels, schools, office blocks and shopping centres. Catering for both internal and external renovations, the complete offering includes windows, screen doors, roofing, cladding, canopies, road carpet and landscaping, painting and decoration.

As well as showcasing its standard product range at Interbuild, the company will also be demonstrating its capability to provide bespoke solutions for specific installations. Stewart Dodd of Satellite Architects - a member company of SPV Special Projects -

worked with the consortium on a project which called for panels to be placed vertically as well as horizontally.

“We approached this with some reservations as this type of application had never been attempted before, anywhere in the world,” says Stewart. “Working alongside SPV and Piz Panels’ technical team, however, we were able to devise a panel that would achieve the desired effect. The finished result was fantastic from both a visual and performance perspective.”

SPV Special Projects has the capability to project manage the entire process from the design stage – including technical drawings and visual projections of the finished project – through to advice on adhering to current building regulations and an extensive after sales maintenance and support service. Based in the West Midlands the company covers the whole of the UK and is also active on the continent.

**Notes to Editors:**

SPV Special Projects was founded in 2008 when a consortium of like-minded companies joined forces to create a specialist technical and design service for working with ‘faces’. All of the component companies are well established and have an excellent track record within their respective fields. While the main contractor is SPV Group, other partners include St Germain Weber, Ash and Lacy, FDT Design & Technology and Satellite Architects, among others. Driven by a desire to go back to ‘old fashioned values’ - by way of championing the importance of communication and collaborative working - the team draw on their individual areas of expertise to address specific project requirements.
