

SPV Special Projects

SPV Special Projects have just completed a prestigious project at the Stade de France Paris. The bridge leading to the stadium was covered with 2,500 square meters of Road Carpet Walkway System, a decorative non-slip waterproof material.

The material was laid in stages with only small sections of the bridge being closed off at any one time. The benefit of this being the busy access way remained open and operational throughout the contract which was completed on time and within budget.
